

Listen with more intelligence.

Whether it's classic R&B or the newest Latin craze, the Internet is where the music is. And STMicroelectronics is a star performer in the process.

ST supplies microchips for computer modems, sound cards, solid state and hard disk storage devices, active loudspeakers and new portable MP3 players. Not to mention computer monitors, for which ST is the world's leading chip maker.

People want better access to music and ST is listening.

We put more intelligence into everything.

STMicroelectronics (formerly SGS-THOMSON) • A world leader in semiconductors for consumer products, automotive, telecommunications, computer peripherals, industrial automation and control systems • Ninety-five locations on five continents • www.st.com
